**EXAMINER'S AMENDMENT and REASONS FOR ALLOWANCE**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Attorney Richard Kim on March 12, 2009.

3. The application has been amended as follows:

Claim 32 was cancelled.

Claim 80 was amended as follows:

80. A computer-readable medium having at least one data structure for use during execution of a program by a computer from which a sound effect can be produced encoded thereon, said computer-readable medium comprising a program and data structure, wherein said program comprises an instruction to vary a produced sound effect, and wherein said data structure comprises:[comprising:]

a variable associated with gain of an identified sound to vary a produced sound effect, wherein at least one of a first sound segment for initiating said sound effect, a second sound segment which is repeatable to sustain said sound effect, and a third sound segment for decaying said sound effect can be adjusted based on the variable to vary the produced sound effect, wherein the pitch of said produced sound effect is selected from within an envelope which is

weighted such that frequencies closer to an originally recorded frequency are more likely to be selected than frequencies toward the edges of the envelope.

Claim 83 was amended as follows:

83. A computer-readable medium having at least one data structure for use during execution of a program by a computer from which a sound effect can be produced encoded thereon, said computer-readable medium comprising a program and data structure, wherein said program comprises an instruction to vary a produced sound effect, and wherein said data structure comprises:[comprising:]

a variable associated with delay of an identified sound to vary a produced sound effect, wherein at least one of a first sound segment for initiating said sound effect, a second sound segment which is repeatable to sustain said sound effect, and a third sound segment for decaying said sound effect can be adjusted based on the variable to vary the produced sound effect, wherein the pitch of said produced sound effect is selected from within an envelope which is weighted such that frequencies closer to an originally recorded frequency are more likely to be selected than frequencies toward the edges of the envelope.

Claim 86 was amended as follows:

86. A computer-readable medium having at least one data structure for use during execution of a program by a computer from which a sound effect can be produced encoded thereon, said computer-readable medium comprising a program and data structure, wherein said program comprises an instruction to vary a produced sound effect, and wherein said data structure comprises:[comprising:]

a variable associated with pitch of an identified sound to vary a produced sound effect, wherein at least one of a first sound segment for initiating said sound effect, a second sound segment which is repeatable to sustain said sound effect, and a third sound segment for decaying said sound effect can be adjusted based on the variable to vary the produced sound effect, wherein the pitch of said produced sound effect is selected from within an envelope which is weighted such that frequencies closer to an originally recorded frequency are more likely to be selected than frequencies toward the edges of the envelope.

4. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to anticipate or make obvious the claimed invention. Specifically, as per independent claims 28, 41, 43, 55, 57, 68, 80, 83, 86, 89 and 92 the prior art fails to teach wholly, or in combination, the following elements:

wherein the pitch of an identified sound is selected from within an envelope which is weighted such that frequencies closer to an originally recorded frequency are more likely to be selected than frequencies toward the edges of the envelope.

The prior arts cited teach a sound effect associated with a transition between display states of a graphical user interface, but does not teach or suggest the claimed limitation as recited in the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
